Methodological note

Due to the coronavirus epidemic, SURS is faced with difficulties in data collection, checking and processing. In this situation SURS continues to be obliged to timely publication of data, but due to the mentioned reasons the data published in this release are of slightly lower quality and less reliable than usually.

The response rate in March 2020 was 65.5%, i.e. 12.6 percentage points lower than the average response rate in 2019 (78.1%).

Due to the higher non-response rate, letters M (less reliable estimate – use with caution) or N (too unreliable estimate to be published) could flag certain data series.

More detailed information on methodological changes during the coronavirus epidemic can be found in the updated [Methodological Explanation](#).

Data are seasonally adjusted.

Data for the last three months are provisional; however, data revisions will still be possible at a later date.

Detailed data

Detailed data and time series are available on the [SI-STAT data portal](#), which enables simple browsing and exporting of data in various formats. Registered users have the possibility to store tables for later

browsing and to sign up to be informed when data are updated.
