Short instructions for the installation of the component for electronic signatures of the documents

Ljubljana, 12.01.2015

Short instructions for the installation of the component for electronic signatures of the documents

1. Requirements for the correct functioning of the component

For the correct functioning of the component for electronic signatures of the documents 'ZZI Web Sign Component' the following is required:

- computer operating system Windows XP
- Web browser MS Internet Explorer (from version 5.5 on).

'ZZI Web Sign Component' is automatically installed on the user's system by the first attempt of signatures of the electronic document from a certain computer. Procedure is described in the next section of this document.

Web browser has to be set in a way to enable the installation of ActiveX component.

2. Installation of the component 'ZZI Web Sign Component' for electronic signatures of the documents

If the component for electronic signatures of the documents is not installed on the computer, a warning that the installation of ActiveX component is needed appears by the first attempt of signatures of the electronic document from this computer.

 Mesto utegne zahtevati ta kontrolnik ActiveX: »ZZI Web Sign Component« »ZZI d.o.o.«. Kliknite tukaj, da ga namestite ...

Warning is written in the row under the toolbar and the caption bar of Web browser.

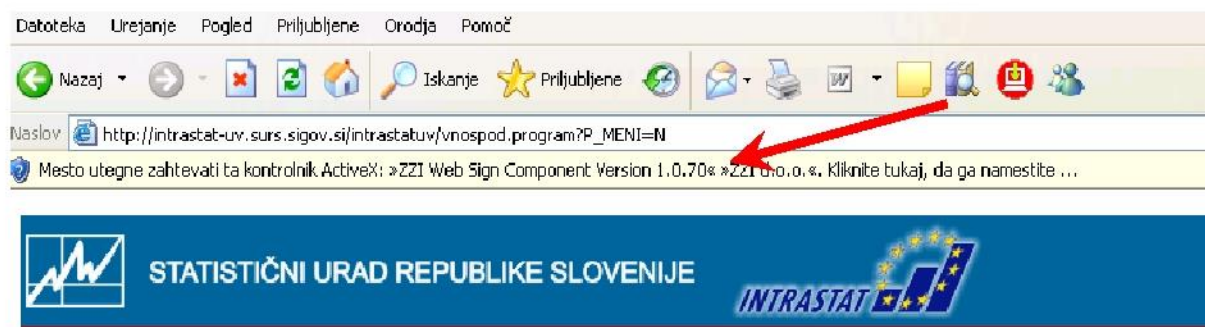

Figure1: Installation of the component for electronic signatures of the documents - 1st step

First you have to click on the 'warning' row on the screen as it is shown in Figure 1 (see red arrow). A menu with three options of continuation of the proceeding opens. Choose the option »Namesti kontrolnik ActiveX...«, which is used for the installation of ActiveX component.

It is required by Web browser to refresh a Web page before the installation procedure (see Figure 2).

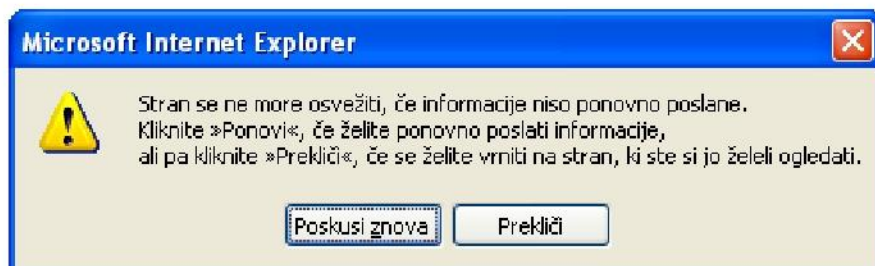

Figure2: Web page has to be refreshed - 2nd step

Click on the button .

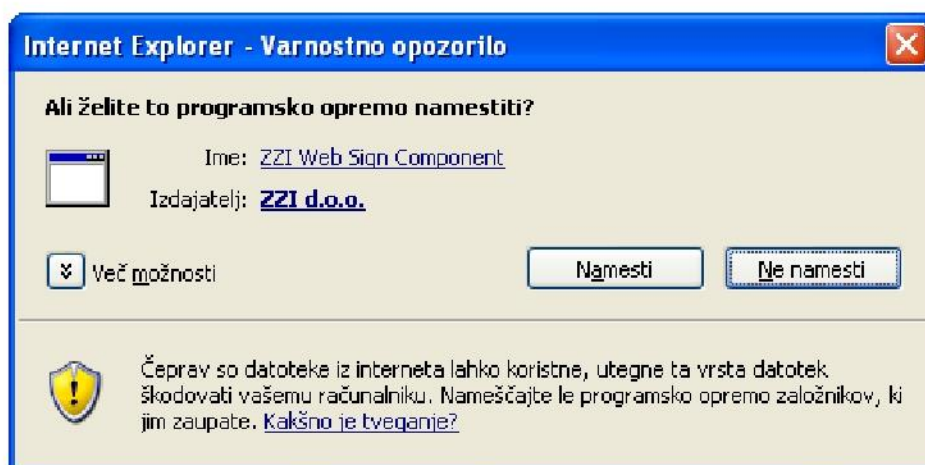

Figure3: Installation of the component for electronic signatures of the documents - 3rd step

Click on the button  for the final installation of the component for electronic signatures of the documents.

When the component is installed, previously communicated application data reappear. A document is submitted for a signature.
